

DoggyRide® Cargo Roof Rack Instructions

(This roof rack is for use on the DoggyRide Original and Novel Trailers only! The cargo rack cannot be used in combination with DoggyRide Strollers)

WARNING

It is very important to read these instructions before assembly and use them in combination with the DoggyRide dog bike trailer owner's manual.

Safety Guidelines

1. Do not exceed the maximum loading capacity of the trailer with the dog and the cargo together. Check the owner's manual of your trailer for the maximum loading capacity of the trailer
2. Secure your load! Strap luggage or groceries by using the side and cross bar of the rack and a (bungee) cord.
3. Do not carry a person or animal on this roof rack.

Assembly

1. Place the cross bars and the side bars in a position as shown on the image below.

2. Take the 6 screws from the smaller carton and use a Phillips screw driver to mount them.
3. When mounting the screws for assembly make sure that the edges next to the rubber are on the outside position. See image below.

4. Install the plastic holders onto the trailer. In case you use the DoggyRide stroller or jogger kit in combination with your trailer you will have them already installed. For instructions on how to install the push bar holders see the trailer owner's manual. The plastic holders will remain permanently on the trailer.

Installation

Install the roof rack on top of the trailer by sliding the rear portion of the side bars into the holders and securing those using the detent pins. The front portion of the rack leans onto the trailer side bars. See image below.

Enjoy a safe ride!
